## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Gali et al. (U.S. Patent Number Re. 35,643).

3. Claim 1: Gali teaches a method for removing membranous lead sulfate deposited on electrodes of a lead acid battery due to sulfation (Col.1, Lines 41-44), featured by using a pulse current having a short pulse width for dissolving the surface layer of said membranous lead surface deposited on said electrodes of said battery (Col.1, Lines 59-67) (Col.2, Lines 1-4) (Col.4, Lines 21-26) (It inherently has current).

4. Claim 2: Gali teaches the limitations of claim 1 as discussed above. Gali teaches charging said lead acid battery while or after applying said pulse current to said battery (Col.4, Lines 32-35), resolving the lead dissolved by applying said pulse current (Col1, Lines 18-20) (after the pulse dissolves the lead deposited on the electrode the lead resurfaces as lead dioxide).

5. Claim 3: Gali teaches the limitations of claim 1 as discussed above. It teaches wherein said pulse width is less than 1 $\mu$ s (Col.1, Lines 59-64) (Since it can be any value less than 5 $\mu$ s it could be less than 1 $\mu$ s).

Art Unit: 2838

6. Claim 4: Gali teaches the limitations of claim 2 as discussed above. It teaches wherein said pulse width is less than  $1\mu\text{s}$  (Col.1, Lines 59-64) (Since it can be any value less than  $5\mu\text{s}$  it could be less than  $1\mu\text{s}$ ).

### ***Conclusion***

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Gelbman et al. (U.S. Patent number 6,184,650) discloses an apparatus for charging and desulfating a lead acid battery using pulse current.
